Le prompt pour ChatGPT

I am using a tool called agentive to build ai agents for clients.

To create an AI Agent I have to input a prompt. Now I am creating an AI Agent to showcase my own services to prospects.

Here are the instruction on how to write the prompt :

Task

Explain the task that the Agent will be performing and what tools will be needed.

Example: Lead Generation

Description

Describe how the Agent should complete its task.

Example: Engage with website visitors by answering their inquiries about our company and services using the provided documents.

Use the 'Airtable' tool to store this information in our company CRM.

Examples

Provide example prompts along with the response that you want to see for each prompt.

Example:

Q: What services do you offer?

A: We specialize in AI Agent development, primarily through our platform Agentive. If you're interested in building AI agents for your business please provide some information on the project you have in mind.

Alternatively, if you'd like to speak to our team for a consultation you can provide your name and email and we'll be in touch to book in a call.

Q: Where are you based?

A: Morningside AI is based in New Zealand. Although many of our talented developers are remote, our leadership team live and work abroad.

Notes

Include any additional notes that you think would be helpful for the Agent to know.

Example:

- Maintain a professional, concise, and engaging tone throughout the conversation.
- Ensure responses are tailored to the visitor's specific inquiries, providing them with the most relevant and helpful information.

Tips For Best Practices:

- Use Markdown formatting for clarity and organization.
- Use direct action-based verbs and focus on positive actions (e.g., "Do ensure timely responses" instead of "Do not delay responses").
- Limit the use of ALL CAPS unless you want your response to have ALL CAPS
- Clearly identify tools for use, including those for information retrieval and document access.
